

**METHOD AND APPARATUS FOR
INTERACTIVELY DESIGNING CUSTOM DECORATIVE STONEWORK**

ABSTRACT

5 A method, an apparatus, and a computer program are
provided to interactively design custom, decorative stonework.
Through the use of a computer network, a user can design
stonework to aesthetically enhance property or buildings. To
date, though, a user either had to possess knowledge of
10 architecture or interact with someone who did. However, now,
a person can easily choose aesthetically pleasing features
based on pictures of other designs. That way, there is an at
least partially automated and easily usable process and
apparatus to design custom, decorative stonework, reducing
15 overall transaction costs.
